Preface	xv
1 Introduction	1
2 Linear Model Basics	15
2.1 Least squares	15
2.2 Estimation of σ^2	17
2.3 F -test	18
2.4 One-way layout	19
2.5 Estimation of a subset of parameters	20
2.6 Hypothesis testing for a subset of parameters	22
2.7 Adjusted orthogonality	23
2.8 Additive two-way layout	24
2.9 The case of proportional frequencies	27
3 Randomization and Blocking	31
3.1 Randomization	31
3.2 Assumption of additivity and models for completely randomized designs	32
3.3 Randomized block designs	33
3.4 Randomized row-column designs	34
3.5 Nested row-column designs and blocked split-plot designs	35
3.6 Randomization model*	36
4 Factors	39
4.1 Factors as partitions	39
4.2 Block structures and Hasse diagrams	40
4.3 Some matrices and spaces associated with factors	42
4.4 Orthogonal projections, averages, and sums of squares	44
4.5 Condition of proportional frequencies	45
4.6 Supremums and infimums of factors	46
4.7 Orthogonality of factors	47
5 Analysis of Some Simple Orthogonal Designs	51
5.1 A general result	51
5.2 Completely randomized designs	55

5.3	Null ANOVA for block designs	57
5.4	Randomized complete block designs	59
5.5	Randomized Latin square designs	60
5.6	Decomposition of the treatment sum of squares	62
5.7	Orthogonal polynomials	63
5.8	Orthogonal and nonorthogonal designs	65
5.9	Models with fixed block effects	67
6	Factorial Treatment Structure and Complete Factorial Designs	71
6.1	Factorial effects for two and three two-level factors	71
6.2	Factorial effects for more than three two-level factors	75
6.3	The general case	77
6.4	Analysis of complete factorial designs	81
6.5	Analysis of unreplicated experiments	83
6.6	Defining factorial effects via finite geometries	84
6.7	Defining factorial effects via Abelian groups	87
6.8	More on factorial treatment structure*	90
7	Blocked, Split-Plot, and Strip-Plot Complete Factorial Designs	93
7.1	An example	93
7.2	Construction of blocked complete factorial designs	95
7.3	Analysis	98
7.4	Pseudo factors	99
7.5	Partial confounding	99
7.6	Design keys	100
7.7	A template for design keys	104
7.8	Construction of blocking schemes via Abelian groups	106
7.9	Complete factorial experiments in row-column designs	108
7.10	Split-plot designs	110
7.11	Strip-plot designs	115
8	Fractional Factorial Designs and Orthogonal Arrays	117
8.1	Treatment models for fractional factorial designs	117
8.2	Orthogonal arrays	118
8.3	Examples of orthogonal arrays	122
8.4	Regular fractional factorial designs	124
8.5	Designs derived from Hadamard matrices	125
8.6	Mutually orthogonal Latin squares and orthogonal arrays	128
8.7	Foldover designs	128
8.8	Difference matrices	130
8.9	Enumeration of orthogonal arrays	133
8.10	Some variants of orthogonal arrays*	134

9	Regular Fractional Factorial Designs	139
9.1	Construction and defining relation	139
9.2	Aliasing and estimability	142
9.3	Analysis	145
9.4	Resolution	147
9.5	Regular fractional factorial designs are orthogonal arrays	147
9.6	Foldovers of regular fractional factorial designs	151
9.7	Construction of designs for estimating required effects	155
9.8	Grouping and replacement	157
9.9	Connection with linear codes	161
9.10	Factor representation and labeling	162
9.11	Connection with finite projective geometry*	164
9.12	Foldover and even designs revisited*	166
10	Minimum Aberration and Related Criteria	169
10.1	Minimum aberration	169
10.2	Clear two-factor interactions	170
10.3	Interpreting minimum aberration	171
10.4	Estimation capacity	173
10.5	Other justifications of minimum aberration	178
10.6	Construction and complementary design theory	179
10.7	Maximum estimation capacity: a projective geometric approach*	183
10.8	Clear two-factor interactions revisited	185
10.9	Minimum aberration blocking of complete factorial designs	187
10.10	Minimum moment aberration	188
10.11	A Bayesian approach	190
11	Structures and Construction of Two-Level Resolution IV Designs	195
11.1	Maximal designs	195
11.2	Second-order saturated designs	196
11.3	Doubling	199
11.4	Maximal designs with $N/4 + 1 \leq n \leq N/2$	202
11.5	Maximal designs with $n = N/4 + 1$	204
11.6	Partial foldover	207
11.7	More on clear two-factor interactions	209
11.8	Applications to minimum aberration designs	211
11.9	Minimum aberration even designs	213
11.10	Complementary design theory for doubling	216
11.11	Proofs of Theorems 11.28 and 11.29*	220
11.12	Coding and projective geometric connections*	221
12	Orthogonal Block Structures and Strata	223
12.1	Nesting and crossing operators	223
12.2	Simple block structures	228
12.3	Statistical models	230

12.4	Poset block structures	232
12.5	Orthogonal block structures	233
12.6	Models with random effects	234
12.7	Strata	236
12.8	Null ANOVA	238
12.9	Nelder's rules	239
12.10	Determining strata from Hasse diagrams	242
12.11	Proofs of Theorems 12.6 and 12.7	244
12.12	Models with random effects revisited	245
12.13	Experiments with multiple processing stages	247
12.14	Randomization justification of the models for simple block structures*	251
12.15	Justification of Nelder's rules*	253
13	Complete Factorial Designs with Orthogonal Block Structures	257
13.1	Orthogonal designs	257
13.2	Blocked complete factorial split-plot designs	259
13.3	Blocked complete factorial strip-plot designs	263
13.4	Contrasts in the strata of simple block structures	265
13.5	Construction of designs with simple block structures	269
13.6	Design keys	271
13.7	Design key templates for blocked split-plot and strip-plot designs	273
13.8	Proof of Theorem 13.2	278
13.9	Treatment structures	279
13.10	Checking design orthogonality	280
13.11	Experiments with multiple processing stages: the nonoverlapping case	282
13.12	Experiments with multiple processing stages: the overlapping case	288
14	Multi-Stratum Fractional Factorial Designs	291
14.1	A general procedure	291
14.2	Construction of blocked regular fractional factorial designs	292
14.3	Fractional factorial split-plot designs	295
14.4	Blocked fractional factorial split-plot designs	300
14.5	Fractional factorial strip-plot designs	302
14.6	Design key construction of blocked strip-plot designs	305
14.7	Post-fractionated strip-plot designs	306
14.8	Criteria for selecting blocked fractional factorial designs based on modified wordlength patterns	308
14.9	Fixed block effects: surrogate for maximum estimation capacity	310
14.10	Information capacity and its surrogate	312
14.11	Selection of fractional factorial split-plot designs	317
14.12	A general result on multi-stratum fractional factorial designs	319
14.13	Selection of blocked fractional factorial split-plot designs	321

14.14 Selection of blocked fractional factorial strip-plot designs	322
14.15 Geometric formulation*	323
15 Nonregular Designs	329
15.1 Indicator functions and J -characteristics	329
15.2 Partial aliasing	331
15.3 Projectivity	332
15.4 Hidden projection properties of orthogonal arrays	334
15.5 Generalized minimum aberration for two-level designs	338
15.6 Generalized minimum aberration for multiple and mixed levels	340
15.7 Connection with coding theory	341
15.8 Complementary designs	343
15.9 Minimum moment aberration	345
15.10 Proof of Theorem 15.18*	347
15.11 Even designs and foldover designs	348
15.12 Parallel flats designs	349
15.13 Saturated designs for hierarchical models: an application of algebraic geometry	352
15.14 Search designs	354
15.15 Supersaturated designs	356
Appendix	365
A.1 Groups	365
A.2 Finite fields	365
A.3 Vector spaces	367
A.4 Finite Euclidean geometry	368
A.5 Finite projective geometry	368
A.6 Orthogonal projections and orthogonal complements	369
A.7 Expectation of a quadratic form	369
A.8 Balanced incomplete block designs	369
References	371
Index	389
